The rise of Robotic Process Automation (RPA)

RPA has gone mainstream

Welcome to the age of Digital Labor!

- No need to fear new technology……despite what Elon Must thinks!
- Bots run tirelessly, flawlessly, 24/7/365!
- Free up employees to focus on more challenging and revenue generating tasks.
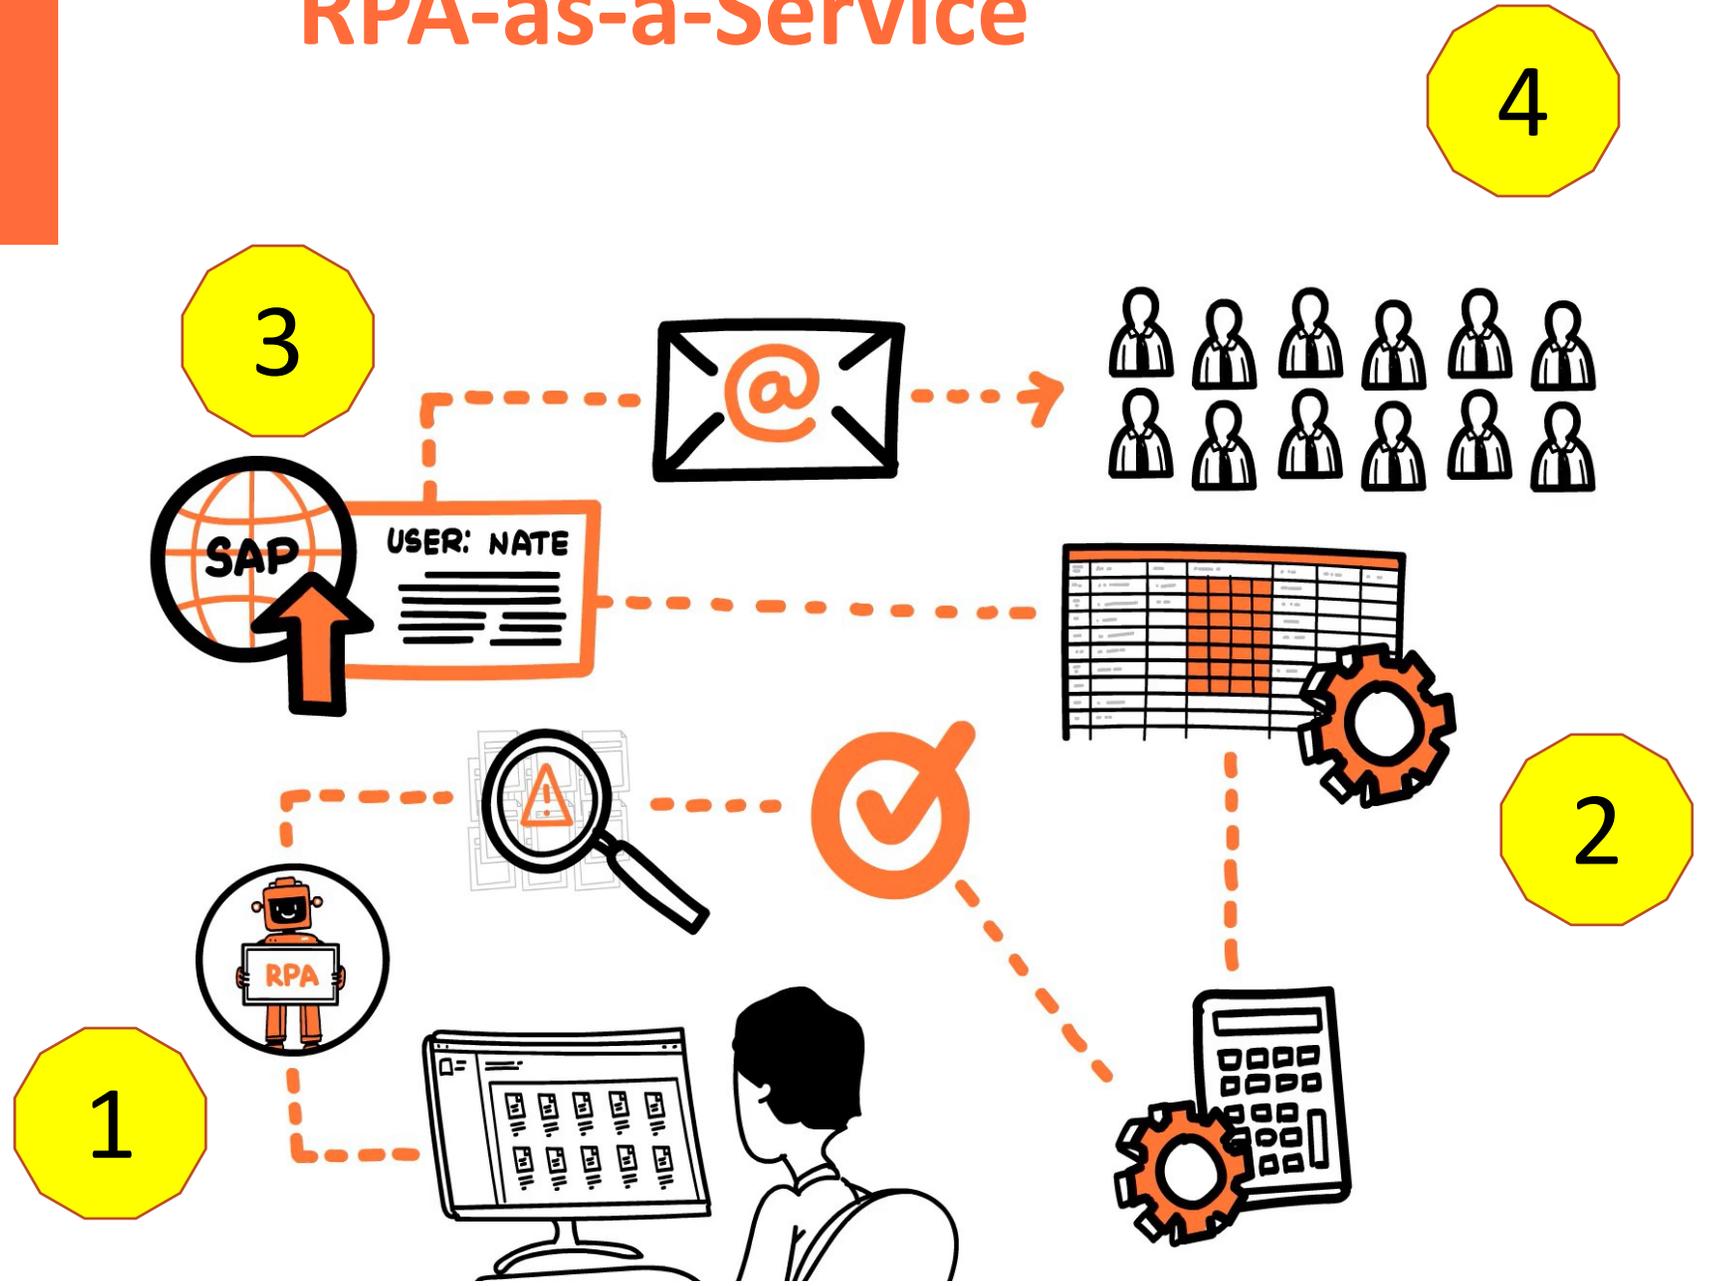

Why & Where to use RPA?

3x a day

2,190 HOURS PER YEAR

- Front Office
- Mid Office
- Back Office
- IT

Benefits of RPA

- **Unattended bots:** Automate repetitive tasks using A.I. without human intervention.
- **Attended bots:** Enable human workers to use A.I.-infused bots on demand.
- **Workload management:** Distribute work across multiple bots intelligently.
- **Scheduling:** Manage the time schedule for running unattended bots.
- **Your choice of deployment:** Deploy on premises or in the cloud (SaaS).
- **Concurrent bot execution:** Increase scalability and run multiple bots on the same virtual host.
- **Credential vault:** Store log-in passwords for your bots with a high level of security.
